

Designing Digital Fabric

Alice Frenz afrenz@ccad.edu

Supply List:

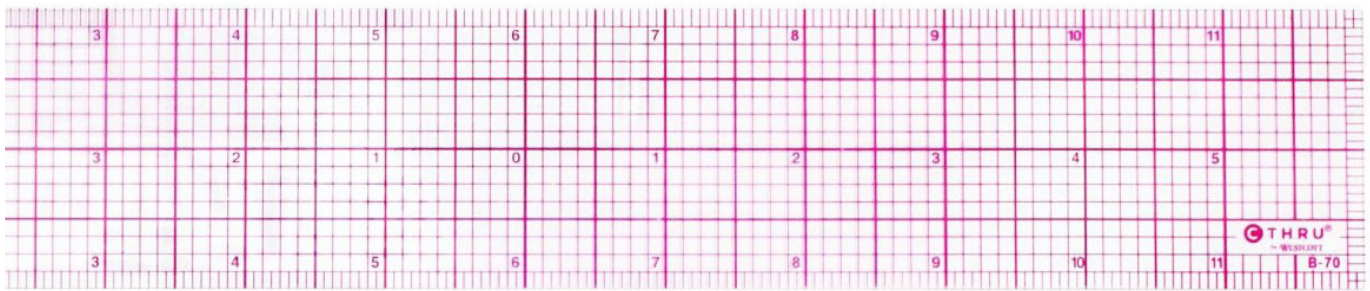

Paper scissors

Clear Office Tape such as Scotch Magic Tape

12" Lightweight C-thru plastic grid ruler for measuring images on the computer screen

Note: the hard plastic rulers for rotary cutting are too stiff and can scratch the computer monitors.

Flash drive for file transfer

Portable Hard Drive or cloud service such as Dropbox or Google Drive for storing your digital work

iPad or smartphone with working camera, or digital camera with USB card reader or cable

The following are the apps I most frequently use on my iPhone and iPad to generate ideas and images for digital fabric: *There may be other apps you will want to try as well.*

Kaleidoscope Camera by Binary Noise Ltd.

KaleidosPic by FluCode Studios

Kooleido by Sarang Bhavsar - *This app is working well on my iPhone 6 but having problems on my older iPad. I will be testing to find an alternative.*

Optional: Photos, scans, text, typography, small objects or art you would like to work with. I will also have a selection of objects and images you could work with.

There are scanners available in the classroom.
